CONTENTS OF VOLUME 187

NUMBER 1, MAY 15, 1990

DNA Contents of Replication without DNA Density Labeling <i>Joseph A. D'Anna, Virgene L. Church, James M. Gale, and Robert A. Tobey</i>	1
Solid-Phase Sequence Analysis of Proteins Electroblooded or Spotted onto Polyvinylidene Difluoride Membranes <i>Darryl J. C. Pappin, James M. Coull, and Hubert Köster</i>	10
Application of a Long-Term Enhanced Xanthine Oxidase-Induced Luminescence in Solid-Phase Immunoassays <i>Alain Baret, Vincent Fert, and Joel Aumaille</i>	20
<i>In Situ</i> Chemical Cleavage of Proteins Immobilized to Glass-Fiber and Polyvinylidenedifluoride Membranes: Cleavage at Tryptophan Residues with 2-(2'-Nitrophenylsulfenyl)-3-methyl-3'-bromoindolenine to Obtain Internal Amino Acid Sequence <i>Dan L. Crimmins, David W. McCourt, Richard S. Thoma, Mitchell G. Scott, Kimberly Macke, and Benjamin D. Schwartz</i>	27
Electrophoretic Separation of High-Molecular Hydrophobic Proteins: Apolipoprotein B and Other Protein Constituents of Low-Density Lipoproteins <i>Vladimir I. Melgunov and Elena I. Akimova</i>	39
A Method for the Isolation and Identification of Pyridoxal Phosphate in Proteins <i>F. Buffoni and S. Cambi</i>	44
Drying Acrylamide Slab Gels for Fluorography without Using Gel Drier and Vacuum Pump <i>M. Krishnan and Henry T. Nguyen</i>	51
Colorimetric Assay for Pluronic F-68 As Measured in Isolated Rat Liver Perfusion Systems <i>Anna M. Tercyak and Tünde E. Felker</i>	54
Covalent Attachment of Peptides for High Sensitivity Solid-Phase Sequence Analysis <i>Ruedi Aebersold, Gary D. Pipes, Richard E. H. Wettenhall, Heinz Nika, and Leroy E. Hood</i>	56
A General Method of Optimizing Automated DNA Synthesis to Decrease Chemical Consumption to Less than Half <i>Anthony T. Yeung and C. Glenn Miller</i>	66
Sample Centrifugation onto Membranes for Sequencing <i>Donald Sheer</i>	76
A Semiautomated 96-Well Plate Assay for Protein Kinase C <i>Dana T. Aftab and William N. Hait</i>	84
Ultrasensitive Enzymatic Radioimmunoassay Using a Fusion Protein of Protein A and Neomycin Phosphotransferase II in Two-Chamber-Well Microtiter Plates <i>H.-D. Hunger, Chr. Flachmeier, G. Schmidt, G. Behrendt, and Ch. Coutelle</i>	89
A Versatile Microtiter Assay for the Universal cdc2 Cell Cycle Regulator <i>Bernard Ducommun and David Beach</i>	94
A Single Column Method for the Assay of Adenylate Cyclase <i>Robert Alvarez and Donald V. Daniels</i>	98
Enzymatic Synthesis of UDP-GlcN by a Two Step Hollow Fiber Enzyme Reactor System <i>Philip A. Ropp and Pi-Wan Cheng</i>	104
Dicarboxy-Dichlorofluorescein: A New Fluorescent Probe for Measuring Acidic Intracellular pH <i>M. Nedergaard, S. Desai, and W. Pulsinelli</i>	109
Fractionation of Particulate Glycogen and Bound Enzymes Using High-Performance Liquid Chromatography <i>Alexander Vardanis</i>	115
Ruthenium Red Complexation with Ionic Polysaccharides in Dilute Aqueous Solutions: Chiroptical Evidence of Stereospecific Interaction <i>Erminio Murano, Sergio Paoletti, Attilio Cesàro, and Roberto Rizzo</i>	120
An Assay for Heparin by Decrease in Color Yield (DECOY) of a Protein-Dye-Binding Reaction <i>M. Yahiya Khan and Stuart A. Newman</i>	124
Fluorescence Detection of Enzymatically Formed Hydrogen Peroxide in Aqueous Solution and in Reversed Micelles <i>Alvaro Sanchez Ferrer, Jillert S. Santema, Riet Hilhorst, and Antonie J. W. G. Visser</i>	129
A Method for Separating Bound versus Unbound Label during Radioiodination <i>G. B. Lipford, Q. Feng, and G. L. Wright, Jr.</i>	133

Conjugation of Synthetic Peptides to Proteins: Quantitation from S-Carboxymethylcysteine Released upon Acid Hydrolysis	<i>Nelly Kolodny and Frank A. Robey</i>	136
A Microcalorimetric Procedure for Evaluating the Kinetic Parameters of Enzyme-Catalyzed Reactions: Kinetic Measurements of the Nitrogenase System	<i>Gerald D. Watt</i>	141
Detection of Glycoproteins Separated by Nondenaturing Polyacrylamide Gel Electrophoresis Using the Periodic Acid-Schiff Stain	<i>Kinchel C. Doerner and Bryan A. White</i>	147
Immunoaffinity Purification of 11-Dehydro-thromboxane B ₂ from Human Urine and Plasma for Quantitative Analysis by Radioimmunoassay	<i>Yoko Hayashi, Fumiaki Shono, Shozo Yamamoto, Wataru Takasaki, Akihiko Nakagawa, Keiko Watanabe, Kouwa Yamashita, and Hiroshi Miyazaki</i>	151
Determination of Endogenous Concentrations of N ¹ -Methylnicotinamide in Human Plasma and Urine by High-Performance Liquid Chromatography	<i>Andrew Somogyi, Debra Siebert, and Felix Bochner</i>	160
Binding of Substrates to Cytochrome P450 Enzymes: Mathematical Artifacts in the Application of Difference Spectrophotometry	<i>Shakunthala Narasimhulu</i>	166
Determination of Platelet Adhesion to Collagen and the Associated Formation of Phosphatidic Acid and Calcium Mobilization	<i>J. Bryan Smith and Carol Dangelmaier</i>	173
Radiometric Measurement of Phosphoribosylpyrophosphate and Ribose 5-Phosphate by Enzymatic Procedures	<i>M. Todd King, Janet V. Passonneau, and Richard L. Veech</i>	179
Calcium Compartmentation and Exchange Rates in Primary Hepatocyte Culture	<i>Robert G. Gish, Carmen Garcia, Terry Reedy, Neil Kaplowitz, and Glenn A. Langer</i>	187
In-Gel Ligand Blotting with ¹²⁵ I-Heparin for Detection of Heparin-Binding Growth Factors	<i>P. R. Murphy, N. Katsumata, Y. Sato, C. K. L. Too, and H. G. Friesen</i>	197

BOOK REVIEWS

<i>Methods in Enzymology</i> , Vol. 176, <i>Nuclear Magnetic Resonance</i> , Part A, <i>Spectral Techniques and Dynamics</i> . Edited by Norman J. Oppenheimer and Thomas L. James	Reviewed by <i>Edwin D. Becker</i>	202

ERRATUM

Volume 150, Number 2, (1985): Hiroyuki Hirano, Takao Nishimura, and Tatsuichi Iwamura, "High-Flow-Rate Hydroxylapatites," pp. 228-234	204
---	-----

NUMBER 2, JUNE 1990

A High-Yield Method for the Isolation of Hydrophobic Proteins and Peptides from Polyacrylamide Gels for Protein Sequencing	<i>Reiner G. Feick and Judith A. Shiozawa</i>	205
Separation and Identification of Desferrioxamine and Its Iron Chelating Metabolites by High-Performance Liquid Chromatography and Fast Atom Bombardment Mass Spectrometry: Choice of Complexing Agent and Application to Biological Fluids	<i>Surinder Singh, Robert C. Hider, and John B. Porter</i>	212
Picogram Quantitation of Total DNA Using DNA-Binding Proteins in a Silicon Sensor-Based System	<i>Viola T. Kung, Peter R. Panfili, Edward L. Sheldon, Robert S. King, Peter A. Nagainis, Baltazar Gomez, Jr., Debra A. Ross, Jonathan Briggs, and Robert F. Zuk</i>	220
Analysis of Protein Digests by Capillary High-Performance Liquid Chromatography and On-Line Fast Atom Bombardment Mass Spectrometry	<i>William J. Henzel, James H. Bourell, and John T. Stults</i>	228
The Measurement of Dimethylamine, Trimethylamine, and Trimethylamine N-Oxide Using Capillary Gas Chromatography-Mass Spectrometry	<i>Kerry-Ann daCosta, J. James Vrbanc, and Steven H. Zeisel</i>	234

Determination of Phosphatidylcholine in a Flow Injection System Using Immobilized Enzyme Reactors	
<i>Mohammed Masoom, Rita Roberti, and Luciano Binaglia</i>	240
Affinity Purification of Polyclonal Antibodies from Antigen Immobilized <i>in Situ</i> in Sodium Dodecyl Sulfate-Polyacrylamide Gels	
<i>Patricia J. Madara, Lisa R. Banghart, Lucinda J. W. Jack, Luz M. Neira, and Ian H. Mather</i>	246
Development of a High-Performance Liquid Chromatography Assay Method and Characterization of Adenosine Diphosphate-ribosylarginine Hydrolase in Skeletal Muscle	
<i>Eung-Soo Kim and Donald J. Graves</i>	251
A Reactor Permitting Injection and Sampling for Steady State Studies of Enzymatic Reactions at High Pressure: Tests with Aspartate Transcarbamylase	
<i>Gaston Hui Bon Hoa, Gérard Hamel, Anthony Else, Guillaume Weill, and Guy Hervé</i>	258
Computerized Determination of Growth Kinetic Curves and Doubling Times from Cells in Microculture	
<i>Herta Reile, Herbert Birnböck, Günther Bernhardt, Thilo Spruß, and Helmut Schönenberger</i>	262
Automated Enzymatic Measurement of Adenosine Deaminase Isoenzyme Activities in Serum	
<i>Toshiharu Muraoka, Tuneo Katsuramaki, Hiroyuki Shiraishi, and Mitchel Mitsuo Yokoyama</i>	268
Lipid Analysis and Fatty Acid Profiles of Individual Arterial Atherosclerotic Plaques	
<i>Lawrence T. McGrath and Robert J. Elliott</i>	273
A Highly Sensitive Method for Determining Both Mn- and Cu-Zn Superoxide Dismutase Activities in Tissues and Blood Cells	
<i>Minoru Nakano, Hirokazu Kimura, Masanori Hara, Minoru Kuroiwa, Masahiko Kato, Kazuhito Totsune, and Toshikazu Yoshikawa</i>	277
Amino and Hydrazino Alkyl Benzoates as Derivatizing Agents for the Separation and Mass Spectrometric Analysis of Oligosaccharides from Bacterial Lipooligosaccharides	
<i>Constance M. John and Bradford W. Gibson</i>	281
Covalent Surface Immobilization of Arg-Gly-Asp- and Tyr-Ile-Gly-Ser-Arg-Containing Peptides to Obtain Well-Defined Cell-Adhesive Substrates	
<i>Stephen P. Massia and Jeffrey A. Hubbell</i>	292
Potentiometric Measurements of Hydrogen and Cyanide Ions in Buffered Media	
<i>Frank J. Lebeda and Sharad S. Deshpande</i>	302
Preparation of Brain Microsomes with Cytochrome P450 Activity Using Calcium Aggregation Method	
<i>Vijayalakshmi Ravindranath and Hindupur K. Anandatheerthavarada</i>	310
A Microplate Version of the DNA-Synthesis Inhibition Test for Rapid Detection of DNA-Alteration Potentials	
<i>J. Heil, G. Reifferscheid, E. Pischtschan, M. Klös, H.-D. Jungblut, and R. K. Zahn</i>	314
Isolation of the Major Subcellular Organelles from Mouse Liver Using Nycodenz Gradients without the Use of an Ultracentrifuge	
<i>J. M. Graham, T. Ford, and D. Rickwood</i>	318
Double Staining of Immunoblot Using Enzyme Histochemistry and India Ink	
<i>Tamao Ono and Rocky S. Tuan</i>	324
Characterization of Indo-1 and Quin-2 as Spectroscopic Probes for Zn^{2+} -Protein Interactions	
<i>John R. Jefferson, John B. Hunt, and Ann Ginsburg</i>	328
Native Agarose-Polyacrylamide Gel Electrophoresis Allowing the Detection of Aminopeptidase, Dehydrogenase, and Esterase Activities at the Nanogram Level: Enzymatic Patterns in Some <i>Frankia</i> Strains	
<i>P. Benoist and J. Schwencke</i>	337
S_1 -Nuclease Enhancement of the Ethidium Bromide Binding Assay of Drug-Induced DNA Interstrand Cross-linking in Human Brain Tumor Cells	
<i>Rajagopal Sriram and Francis Ali-Osman</i>	345
Solid-Phase Synthesis and Applications of <i>N</i> -(<i>S</i> -Acetylmercaptoacetyl) Peptides	
<i>Jan Wouter Drijfhout, Willem Bloemhoff, Jan T. Poolman, and Peter Hoogerhout</i>	349
Partial Characterization of Dermatan Sulfate by Proton Nuclear Magnetic Resonance Spectroscopy	
<i>María O. Longas</i>	355

Detection of Endothelial-Derived Relaxing Factor in Human Plasma in the Basal State and following Ischemia Using Electron Paramagnetic Resonance Spectrometry	<i>Åke Wennmalm, Boel Lanne, and Ann-Sofi Petersson</i>	359
Low-Ratio Hybridization Subtraction	<i>Joseph Fargnoli, Nikki J. Holbrook, and Albert J. Fornace, Jr.</i>	364
Use of Benzyl 2-Acetamido-2-deoxy-3- <i>O</i> -(2- <i>O</i> -methyl- β -D-galactosyl)- β -D-glucopyranoside [2'- <i>O</i> -Methyl-lacto- <i>N</i> -biose I β Bn] as a Specific Acceptor for GDP-Fucose: <i>N</i> -Acetylglucosaminide α (1 $\rightarrow$ 4)-L-Fucosyltransferase	<i>Shin Yazawa, Ragupathy Madiyalakan, Rakesh K. Jain, Nobuo Shimoda, and Khushi L. Matta</i>	374

Author Index for Volume 187	379
-----------------------------	-----

NOTICE

The Subject Index for Volume 187 will appear in the December 1990 issue as part of a cumulative index for the year 1990.

ANALYTICAL BIOCHEMISTRY

Methods in the Biological Sciences

INFORMATION FOR AUTHORS

Analytical Biochemistry is an international journal that publishes original articles on methods and methodology of interest to the biological sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

- Cell biology and cell, tissue, and organ culture methods that are of general application.

- Membranes and membrane proteins. These methods form a major section of interest.

- Procedures of interest in the field of molecular genetics including those necessary for cloning, sequencing, and synthesis of nucleic acids and for mutagenesis.

- Purification of enzymes and other proteins, but only if the methods are both novel and applicable generally, i.e., the interest is in a means of purification rather than in the protein that is being purified.

- Immunological techniques both analytical and preparative, if they are of general applicability by biochemists. Immunoassays are included but only if a unique approach is introduced rather than the determination of a substance not previously assayable.

- Pharmacological and toxicological research techniques that offer a biochemical approach.

- Review articles dealing with timely topics. Although these are generally invited, unsolicited outlines or manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in **Analytical Biochemistry** represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in quadruplicate to:

Analytical Biochemistry

Editorial Office
Seventh Floor
1250 Sixth Avenue
San Diego, California 92101

In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

An extended Instructions to Authors is published in the July issue during odd-numbered years. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC-IUB rules and recommendations, and accepted abbreviations.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about $8\frac{1}{2} \times 11$ inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 55 letters and spaces), an abstract (250 words), the address to which proof should be mailed, and the corresponding author's telephone number and fax or telex number. In creating a title for your paper, please omit words such as *novel*, *rapid*, *improved*, *simple*, *sensitive*, *efficient*, *convenient*, *new*. Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. Abbreviations should not be used in the article title or running title. Please number all pages of the manuscript. The appropriate subject category should be indicated on the title page.

Text. The suggested organization of an article is: abstract; introductory statement; Materials and Methods; Results; Discussion; Acknowledgments; References. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept variation from it but does require an abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC-IUB Joint Combined Commission on Biochemical Nomenclature (JCBN) as published in the extended Instructions for Authors, appearing in the July issue of this journal during odd-numbered years.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text: each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for photoreproduction. A convenient size for drawings is $8\frac{1}{2} \times 11$ in. (21×27.5 cm). They should be planned to fit the proportion of the printed page ($7\frac{1}{8} \times 9$ in.; column width, $3\frac{1}{2}$ in.). Lettering on drawings should be of professional quality or generated by *high-resolution* computer graphics and should be large enough that in the printed version the lettering is 6–8 point. Except for single-letter part designations lettering on printed figures should not be larger than 10 points. Wide variation in type sizes is undesirable. If, after reduction, the type in the figures would be larger than the type in the text, then publication of the article may be delayed. Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Alternatively, *high-quality* computer graphics may be acceptable. Graph paper if used should be ruled in blue. Grid lines that are to show in the final reproduction should be inked in black. Properly prepared glossy prints are acceptable.

Photographs must be kept to a minimum. All photographs should be submitted as single glossy prints with strong contrasts and not mounted on cardboard; the magnification should be indicated by a scale where possible. Simple histograms should be avoided. A table or a paragraph in the text is preferred.

Illustrations in color can be accepted only if the authors defray the cost.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. Each table should have a short explanatory title.

Authors may wish to submit complex tables or sequence information as camera-ready copy. In this way, they are spared tedious proofreading and the chance of error is reduced. Tables submitted as camera-ready copy should be typed single-spaced whenever possible, and preferably submitted as 5×7 -in. glossy prints.

Footnotes should be designated in text by superscript numbers and typed on a separate sheet following the References. Footnotes to tables should be identified with lowercase italic superscript letters and placed at the bottom of the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Whenever reference is made to an author's manuscript "in press," copies of the manuscript must be included. Abbreviations of journal titles should follow the style used in *Chemical Abstracts Service Source Index*, 1985. Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Mitchell, L. G., and Merril, C. R. (1989) *Anal. Biochem.* **178**, 239–242.
2. Bovey, F. A., and Jelinski, L. W. (1983) *Chain Structure and Conformation of Macromolecules*, p. 150, Academic Press, New York.
3. Kaminsk, L. S. (1985) *in* Bioactivation of Foreign Compounds (Anders, M. W., Ed.), pp. 157–175, Academic Press, Orlando, FL.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.
